Plant Cleaning

Fire & Smoke Damper Inspections

Kitchen Exhaust Cleaning

Plant Cleaning

Micro Inspector

Versa Scope

- ROBOTIC INSPECTIONS
- AIR TESTING
- WRITTEN DOCUMENTATION

Using state-of-the-art technology is a powerful tool when faced with difficult situations. The use of robotics when performing inspections provides us with the ability to detect, document and present on video.

- Detection of microbial growth before it becomes a liability
- Detection of damaged ductwork and related components
- Verifies the quality of HVAC/Duct Cleaning when work is completed
- The robot is able to operate in pipes as small as 6"
- It is built for use in industrial plants and manufacturing facilities, hospitals, municipal buildings, and schools.

Dusty Ducts also offers air testing and analysis. Written documentation is submitted with all inspections and testing, as well as recommendations.
